

Digital Peg Board

We will try a digital peg board (ebadders.com) to pick the games on Wednesdays. It will be on a tablet which anyone can use.

It tries to:

Have the same number of games for each player over the session.

Have balanced and challenging games, by grading players on their previous game results.

Play interesting games with a variety of partners and opponents, it tries to not give you the same partner etc.

1. When you arrive and are ready to play, make sure your name is not sleeping (no bed icon next to your name) by pressing the play button.
2. If you leave early, press the pause button to put your name to sleep.
3. When you finish a game, indicate to anyone near the tablet whether you won or lost with a thumbs up or down.
4. If you are near the tablet, enter the win/loss score against the game just finishing. It doesn't have to be accurate. Enter 21-0, 21-19 or anything else. All that matters is who won or lost.
5. The digital peg board will pick the next game, call it out.

If you're interested in your statistics, let Neil know and he will send your email address off to eBadders.com and they will send you a link so you are able to create an account.
